

DIG WITH WATER **HYDRO EXCAVATION**

The Riley Industrial name has been synonymous with quality service and workmanship for over 50 years. While expanding our services, we are now recognized as the leader in hydro excavation services. Riley currently owns and operates an entire fleet of 48 GapVax trucks. Each truck is standardized and is specifically designed and built to meet the growing need for safe excavation.

Hydro excavation is a non-destructive method of excavation using high pressure water to loosen the soil and a simultaneous vacuum to remove the spoils. Unlike backhoes, augers, and trenchers, this method virtually eliminates the risk of damaging buried pipelines, cables, utilities, and other underground structures while digging. In addition, this equipment offers diversity through multiple applications and environments.

INDUSTRY APPLICATIONS:

Pipelines

Telecommunications

Municipal Utilities

Plants and Refineries

Sub-surface Utility Engineering

Commercial Construction

Storage Tanks

Electrical Utilities

Farm and Ranch

Environmental

Public Works

Road Construction
